GOLDEN FARM SOLUTIONS

Manufactures & Exporters of :
'Solar Dehydrated' Fruits & Vegetables

&

Pre-Blended Ready-to-Cook Products

Fresh vegetables are NO MORE necessity for your favourite Veg / Non-Veg curries

Does it sound exaggerated?

Golden Farm Solutions (GFS) now serves a broad range of Dehydrated Vegetables that are equally good as fresh vegetables.

These vegetables are dried naturally for long term use consisting of the same taste and nutrition.

Ideal for House-wives, Office goers, Bachelors, students, travellers, hikers, and institutions with food facilities.

**Use the Dehydrated Vegetables in direct cooking process
or
Dip in normal / hot water to get Re-Hydrated and Use them**

-  **100% Natural / Organic**
-  **Solar Dehydrated**
-  **No-preservatives added**
-  **Ready-to-Eat**
-  **Ready-to-Cook**

WHY DEHYDRATED FRUITS & VEGETABLES

In today's lifestyle when both the members of the family work and do not find time to shop for fresh vegetables, clean them, sort them and size them before cooking, dehydrated vegetables are convenient. As dehydrated vegetables are obtained from Solar/sun-dried and grinded versions of fresh vegetables, these products are mainly used as condiments in different dishes. Pure content, hygienic processing method, long shelf life, distinctive taste and smell, high nutritional value, cost-effectiveness and moisture-free content are the main aspects of these dehydrated vegetables.

Dehydration in food processing means by which many types of food can be preserved for indefinite periods by extracting the moisture, thereby inhibiting the growth of microorganisms. Dehydration is one of the ancient methods of food preservation.

The benefits of dehydrating food for preservation are twofold:
by removing all of the food's moisture, you inhibit the growth of bacteria so the food stays preserved and safe much longer &
you shrink the size of the food, making storage a snap.

Dehydrated Foods are ready-to-consume food products with a longer shelf life. Hence dehydrated Fruit & vegetables are fast emerging as favourite snack options. This increase in demand is fuelling growth in sales of international market and it is catering rising consumer need

There is a huge demand for dehydrated vegetables in the market due to the below reasons:

- ✓ **Nutritious and healthy**
- ✓ **No preservative or chemical is used**
- ✓ **Money is saved**
- ✓ **Easy storage and preservation**
- ✓ **Make an assortment of Homemade goods**
- ✓ **Portable**
- ✓ **Perfect for plant based diet**
- ✓ **Reduces waste**
- ✓ **Prepares for emergency**

T O M A T O

Using Fresh Tomoato

Using conventional fresh Tomato can involve time consuming procedures, a lot of wastage, seasonal variation of cost & low shelf life.

Food Industries are looking out for new methods of ingredient application while minimizing cost, time & wastage, while maintaining quality & flavor of the ingredients.

**Through Our Innovative Hybrid SOLAR Food Dehydrator,
Only moisture is REMOVED from the Fresh vegetables
But the Flavour, Nutrients, Fibre and Vitamins will stay behind.**

Using Dehydrated Tomato Variants

Our line of Dehydrated Tomato variants meet all the guidelines of the food service industry. Eliminates the hazels of using conventional fresh tomato like peeling, cutting, slicing, chopping, crying, grinding.

Maintaining the quality, increasing the shelf life to upto 1 year Reducing the cost considerably.No wastage at all. We have developed these products to eliminate the issues raised due to the usage of conventional fresh ingredients.

We believe that these products are a game changer which caters to all segments of the food industry.Our products can be used in a variety of applications in the current food ingredient industry.

Products available in the form of :

Flakes, Powder, Minced, Chopped, Toasted & Fried Dehydrated

Colour, Taste & Aroma: Characteristic & Flavor of Fresh. Free From Artificial Flavor

Ingredients (Raw Material): Fresh

Shelf Life: 12 Months

The list of Dehydrated Vegetables available at **GFS** for day-to-day use.

MANGOS

Using Fresh / Dehydrated Mango

Dehydrated mangoes are slices or strips of mangoes that were left to dry over a period of time.

The process sucks out all the juices of the fresh fruit slices so they can be stored and enjoyed later in time.

Dried fruits keep longer. It's a way to preserve your harvest fruits and fill up your pantry for the winter to come.

Dehydrated Mango is a delicious healthy snack!

Flavor variations and ideas

You can also flavor your mango slices before you dry them!

Naturally, they are unsweetened and plain as is (gluten-free).

Here are some flavor ideas, sprinkle the following over your mango slices before you dry them:

- Sugar – try brown sugar, although mangoes are quite sweet
- Red chili pepper ground – i.e cayenne, Kashmiri chili pepper.
- Ground green cardamom,
- Ground cinnamon

What is a Dehydrator

A dehydrator is a device, which carefully dries out fruits over a period of time.

Its job is just to dry fruits, vegetables, and herbs at a low temperature.

A dehydrator consists of the main heating part of the device and racks, which can be removed and stacked over each other as needed.

It's easier to control the temperature and it's more hygienic to dry mango slices that way.

Are Dehydrated Fruits & vegetables good for you?

Dehydrated fruits and vegetables are healthy and nutritive dense food. According to the academy of nutrition and dietetics, a nutrient-dense food has a high amount of vitamins, minerals and other health-promoting compounds with relatively few calories.

We dehydrate any fruits

Shelf-life : 12-18 months

Coconut Water Powder

Nutrient-rich tender coconut water is now available in powder form in delightful packs.

The powder retains the natural attributes of rich nutrients, essential electrolytes, vitamins and minerals that one associates with tender coconuts.

We capture the authentic taste of tender coconut water and add no preservative, artificial flavour or colour. Our product is 100 per cent gluten-free.

After a refining process, the moisture is removed. This leaves behind the powder rich in nutrients and carbohydrates, which is packed into convenient packs. The powder can be stirred in water and consumed.
